

# DAVINCI TURRET PACKAGE

The turret is perhaps the most challenging of all roofing structures because it is a cone. Typically it takes many years of experience to master the turret. In the past it was necessary to manually trim or shape each tile and then carefully fit them on the tapering surface. Up until now this has been a painstaking, time consuming method that is, in many cases, trial and error.

DaVinci Roofscapes has simplified this excruciating labor intensive process and made it possible for a professional roofer to quickly install a great looking custom engineered roof on virtually any turret.

You provide us with 3 dimensions for the turret and DaVinci Roofscapes will create a custom engineered Turret Package just for you. You Provide:

1. Length
2. Shingle Exposure
3. Circumference / Diameter

DaVinci will figure out the rest and deliver it to you ready to install. Your turret package will include custom cut starter tiles, field bundles, transition bundles and finish bundles all labeled by courses.

*Contact your local DaVinci Roofscapes Sales Representative to find out more.*

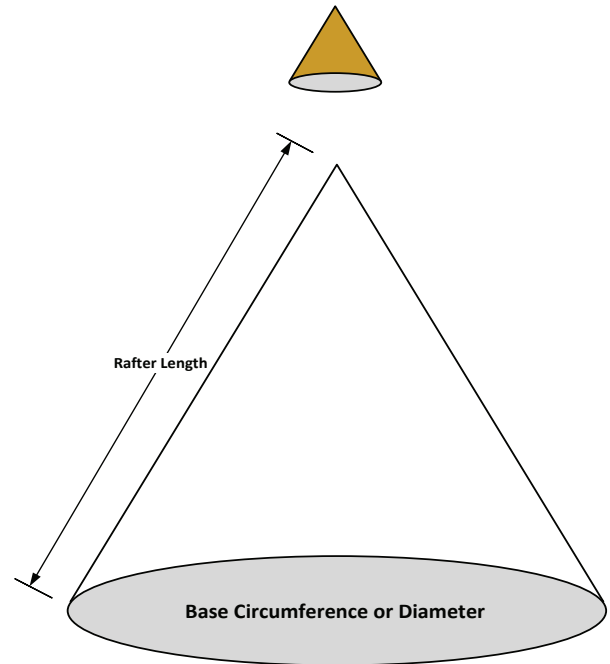

# ABOUT DAVINCI TURRET PACKAGE

- Rafter length and shingle exposure determine the number of courses.  
*\*Note: maximum exposure is 7"*
- Circumference determines the quantity of Starter Bundles and the first course.
- With the radius or diameter we can calculate the circumference.
- All turret packages are made with Multi-Width Slate and Multi-Width Shake products.
- Shake Turrets are cut down from 22" to 18" in length then cut at angles to fit your unique turret. They are also installed at a maximum of 7" exposure.

## WHAT YOU GET

- DaVinci Roofscapes' formulation coursing rows, pre-cut tiles and labeling each row according to the dimensions given
- All color and random size collation--sent out in bundles according to the row that the tiles correspond to on the turret  
*\*Note: Small tiles for the top rows will be color collated: exact placement will have to be field selected. DaVinci will always supply more pieces than required for each row number which will allow for normal random size selection as the tiles are applied.*
- All DaVinci Turret Packages are palletized and labeled respectively.
- A Turret pallet will include the pre-ordered starter tiles and all coverage of Stages I, II & III for each specific turret.

**Note: The Cap size TBD  
after shingles are  
installed for a perfect fit**
